

Error Fetching Readings warning in Flowsheets

Flowsheets readings/measurements sometimes include user comments. In versions prior to this release (2016.1.6), carriage returns in multiline comments were not properly handled in the JAVA layer. Thus, an error displayed and these readings/measurements could not be viewed.

This artifact changes the handling of comments so that they are retrievable even with multiline comments. For readings/measurements with multiline comments created after this release, users should not encounter an Error Fetching Readings warning when retrieving data.

Setting Flowsheets to a historical view, i.e., prior to the date this release is installed, that includes readings/measurements data with multiline comments will still result in the error.

Required action: Test in your normal Flowsheets workflow.
