**If you receive the following error, or similar, when running a CareVue executable, you may need to restart Samba (Note** This is typically caused because a PC is running BCMA directly from the repository instead of locally. That should be corrected.)**

Command to Restart Samba:

[llamb@ov-07 ~]$ sudo service smb restart

[sudo] password for llamb:

Shutting down SMB services:	[OK]
Shutting down NMB services:	[OK]
Starting SMB services:	[OK]
Starting NMB services:	[OK]

Try running the CareVue executable again after Samba is restarted.
