Release 2017.2.0 Medication Reconciliation Fixes

Orders older than 40 days display in the Advanced Med Rec dialog

All orders display appropriately in the Advanced Med Rec dialog. A new **MSCE MED REC DEFAULT DAYS BACK** parameter with a default of 365 days in the past now controls the look-back date for medications to be displayed in the **Medication Reconciliation** dialog.

Required action: Test in your normal Advanced Med Rec workflow on patients with orders more than 40 days old.

Suggested additional testing: Though 365 is the recommended setting for the **MSCE MED REC DEFAULT DAYS BACK** parameter, change the parameter to a lower value and confirm that orders display within the **Advanced Med Rec** dialog according to the input value and order start date.

Put home medications On Hold with Advanced Med Rec

A new **MSCE HOLD HOME MED** parameter enables **Advanced Med Rec** dialog configuration that allows / disallows putting home medications on hold. When this parameter is set to **YES,** users can Stop a home medication, after which a second dialog asks users to **DC** or **HOLD** the home medication. If the parameter is set to **NO**, the second dialog displays but without the **HOLD** option.

Free text doses and associated order SIG display in CareVue

When free text doses for inpatient, outpatient or home medication order entry are entered in the **Medication Reconciliation** dialog, the free text dose and the associated order SIG display in CareVue.

Required action: Use the **Medication Reconciliation** dialog to enter inpatient, outpatient and home medication orders with free text dosages. Confirm that the dosage and the associated order SIG display appropriately in CareVue and in the order details.

Add and Change buttons for IV orders not Advanced Med Rec options

The **Add** and **Change** buttons for IV orders are no longer options in the **Advanced Med Rec** dialog.

Required action: Test in your Advanced Med Rec workflow for IV orders.

New RPC for pulling in medications

The removal of inactive medications from **Medication Reconciliation** dialogs no longer uses the same remote procedure call as the **Meds** tab in CareVue.

Required action: Test in your standard workflow for entering medication orders via the **Medication** Reconciliation dialog, **Meds** tab and **Orders** tab.

The **Medication Reconciliation** dialog should display medication orders for the following statuses: Active, Pending, Unreleased, Renewed, Flagged, Hold, Transfer to IP and/or Transferred to OP.

It should not display medication orders for the following statuses: Complete, Expired, Discontinued, Discontinued(edit), Lapsed or Delayed.
