

## Pricing Engine Correction

### Pricing Engine billing no longer depends on defined strength units

Previously, when unit strengths were not set up in the **IV Additive** file, the Pricing Engine calculated the wrong billing amount. The correct billing amount now calculates regardless of unit strength setup.

**Required action:** If there is no additive strength set up in the OpenVista **Drug** file, add a custom strength in the pricing rule configuration for that drug. The associated strength units for this custom strength come from the **IV Additive** file. Test the Pricing Engine using drugs without a defined strength in the Pricing Engine Configurator and no strength units defined in the **IV Additive** file, e.g., azacitidine. The correct billing amount will be sent in FT1.10.
