Release 2018.1.7 Updates

Pharmacy

Fill on request medications correctly charge on dispense

Medications associated with an orderable item that is configured with a Fill on Request schedule type only charge on dispense and not when administered in BCMA.

Required action: Test by ordering medications associated with an orderable item configured using a Fill on Request schedule type, e.g., eye drops, creams. Order from both CareVue and the Pharmacy application. Verify the medication orders in Pharmacy and assign a pre-exchange dose. Administer doses of the medication via BCMA. Verify that the medications are charged on dispense and not on administration.

Outpatient account number prompt consistently displays

The patient account number prompt now consistently displays prior to order entry. The prompt displays all account numbers ever used for the patient, from which the user can choose one. The prompt displays before each order entered for the patient, regardless of whether multiple orders are entered within the same session. The charge message generated by the order entry or administration correctly includes the selected account number.

```
PI  Patient Information            SO  Select Order
PU  Patient Record Update          NO  New Order Entry
Select Action: Next Screen// no   New Order Entry

    Select one of the following:

        1            IMO CLINIC DEC 5,2018
        2            EMERGENCY ROOM DEC 6,2018

Enter response: 1  IMO CLINIC DEC 5,2018
1  2000002020    DEC 6,2018@18:10
2  2000002019    DEC 6,2018@18:08
3  2000002017    DEC 5,2018@10:55
4  2000002016    DEC 5,2018@10:42

Choose ACCOUNT NUMBER:  (1-4): 2000002020// 3

Account #: 2000002017

Do you want to change the Account Number for this order (Y/N)?
