

## *Flowsheets*

### *IV site assessment and fluid documentation display*

IV site and IV fluid documentation are no longer intermittently removed from the Flowsheets display. Also, IV site assessment documentation is no longer removed from Flowsheets after the IV site or IV infusion is documented as discontinued.

**Required action:** Test in your normal IV Flowsheets documentation workflow.

#### **Suggested additional testing:**

1. Test by documenting a new IV site and a new IV fluid start. Add additional IV action items (rate changes, etc.), as well as IV site assessments, at various time intervals. Discontinue either the IV site or infusion. Verify that the historical documentation for the IV site/infusion displays on Flowsheets.
2. Test by documenting a new IV site and new IV fluid start. Add additional IV action items (rate changes, etc.), as well as IV site assessments, at various time intervals. Continue to document IV action items and site assessments at various intervals over a period of several hours/days. Verify that the historical documentation for the IV site/infusion displays on Flowsheets.
