

MOVE & Patient Lists 1.4.2 and NoteAssist 1.4.2

This release includes performance and stability improvements and should be installed on all systems running CareVue 2018.1.8 or higher.

Patient Lists function correctly for patients with problems having no Preferred Term

This release fixes an issue where a patient with a problem that had no Preferred Term setting was not added to the relevant patient lists.

Printed headers display properly

This release addresses an issue with NoteAssist PDF documents. Printed headers now display as expected.

Embedded, required checkbox elements display properly in Edit mode

The text of required checkbox elements, which previously were grayed out when embedded in parent elements during Edit mode, now display correctly.

Enhanced PEHR prints correctly with long radiology reports

Long radiology reports no longer create overlapped printing in the radiology section of the Enhanced PEHR. This issue is resolved.

Required actions: Evaluate and confirm each fix in your standard MOVE, Patient Lists and NoteAssist workflows.
